## Are solar panels worth it?

---

Solar panels make financial sense for most homeowners, but certain conditions maximize your return on investment. Here's when solar is typically worth it: Solar panels are a long-term investment that generate free electricity for 25-30 years. If you own your home, you'll capture all those benefits.

## Is going solar worth it?

If you don't have high energy costs or your state makes it harder to go solar, it might not be worth it financially. Even after weighing all the pros and cons, the decision to go solar is a highly personal one.

## Are solar panels a good investment?

Pros: The energy produced by your solar system is free, and if your utility uses net metering, it credits you for any excess electricity that is added to the grid, helping you to break even more quickly on the project's cost. You may be able to get a loan to help pay for the costs of installing solar panels.

## Do solar panels save money?

Many households save thousands of dollars over their panels' lifetime. These savings are especially noticeable in states with high national electricity rates. Your energy costs become predictable for decades when you install solar panels. The system typically pays for itself within 5 to 10 years. After that, the electricity you generate is free.

## How much will solar panels cost?

Without solar panels, the average EnergySage shopper will pay about \$87,000 in electricity bills over the next 25 years, according to EnergySage data. If you install solar panels now at an average cost of \$29,649 before any incentives, you'll save about \$57,000 over the next two and a half decades.
