

What does a solar inverter do?

---

A solar inverter is a key device in any solar power system that converts the direct current (DC) electricity generated by your solar panels into alternating current (AC) electricity, which is what your appliances, outlets, and the electrical grid use. Without a solar inverter, your solar panels would produce electricity you couldn't use.

Is a solar inverter a type of converter?

A solar inverter is a type of converter, though the rules of physics may suggest otherwise. It converts or inverts the direct current (DC) energy produced by a solar panel into Alternate Current (AC), which is the type of energy most homes use. DC energy is not safe for use in homes.

Do solar systems come with a solar inverter?

Solar systems come with a solar inverter, PV panels, battery, and a rack to keep all the parts in place. Let's talk more about what is a solar inverter. A solar inverter is a precious component of the solar energy system.

What are the main types of solar power inverters?

There are four main types of solar power inverters: central inverters, string inverters, microinverters, and power optimizers. Smaller solar arrays may use a standard string inverter, where DC energy flows from each panel into a wiring harness that connects them all to a single inverter.

Are solar inverters sustainable?

Sustainable & Eco-Friendly Using a solar inverter helps reduce your carbon footprint, and when paired with a system like MyGrid 10k, you're contributing to a greener planet. You're producing and storing your own clean energy, reducing reliance on fossil fuels, and helping create a more sustainable energy future? all from the comfort of your home.

How do microinverters work?

Microinverters are small, an individual solar inverter is installed on the back of each solar panel. Instead of one centralized inverter, each panel has its own. How it works: Each panel converts its DC power to AC independently. The system then feeds usable AC electricity directly to your home or the grid.
